Software Engineer with 6 months of production experience building and shipping features in Java, Spring Boot, and microservices. 2026 CSE Graduate (GGSIPU) with a concurrent IIT Madras Data Science diploma and 400+ LeetCode problems solved.

WORK EXPERIENCE

ONELAP TELEMATICS

Noida, Uttar Pradesh, India

Software Engineer Intern

Aug 2025 – Feb 2026

- Debugged and resolved a silent real-time alert failure in a microservices architecture by tracing a cross-service state refresh broadcasting to all user-owned devices instead of the triggering device.
- Built a Spring Boot service to parse 100K+ daily GPS records and extract trip and stop events, with handling for dropped packets, invalid coordinates, and offline device scenarios.
- Designed a fault-tolerant background recovery service that detects and recomputes missing daily data summaries on demand, ensuring 100% data completeness when scheduled cron jobs fail across services.
- Migrated a mobile Flutter app to a web application within an Agile sprint cycle, integrating 6+ web-compatible APIs (Google Maps JS, Firebase Web, WebSocket) to replace incompatible plugins; shipped to production.
- Redesigned device troubleshooting logic by mapping unhandled failure states, cutting escalation rate by ~70%.
- Reduced 2+ redundant API calls per session by replacing timer-based polling with state-driven triggers.

PROJECTS

WEALTH TRACKER | FULL-STACK FINANCE PLATFORM | [GITHUB.COM/NAMAN-KHURANA/WEALTHTRACKERPROJECT](https://github.com/Naman-Khurana/WealthTrackerProject)

STACK: JAVA, SPRING BOOT, NEXT.JS 15, TYPESCRIPT, MYSQL, SPRING SECURITY, DOCKER, REACT QUERY, CHART.JS, TAILWIND CSS

- Built a personal finance tracker with production-grade auth (JWT, refresh token rotation, HttpOnly cookies) and role-based access control across the Spring Boot backend and Next.js frontend.
- Eliminated circular fetch issues in bidirectional JPA relationships using lazy loading and efficient DTO projections; used MapStruct for type-safe entity-DTO mapping across the service layer.
- Engineered a multi-container architecture for backend and frontend applications using Docker Compose; built real-time financial dashboards using React Query caching and Chart.js visualizations.

NEXASERVE AI | CLI-BASED RAG CHATBOT | [GITHUB.COM/NAMAN-KHURANA/NEXASERVEAI](https://github.com/Naman-Khurana/NexaserveAI)

- Built a Generative AI CLI chatbot using Python and LangChain where documents are ingested and embedded into FAISS as a vector store, and user queries are answered using Gemini with retrieved context.

TECHNICAL SKILLS

LANGUAGES: JAVA, PYTHON, JAVASCRIPT, TYPESCRIPT

BACKEND: SPRING BOOT, SPRING MVC, SPRING SECURITY, MICROSERVICES

FRONTEND: REACT.JS, NEXT.JS, TAILWIND CSS, HTML, CSS

DATABASES: MYSQL, JPA, HIBERNATE

CONCEPTS: OOP, DSA, DBMS, SYSTEM DESIGN, JWT, RBAC, WEB SECURITY, MVC ARCHITECTURE

TOOLS: GIT, DOCKER, POSTMAN

EDUCATION

- **B.TECH IN COMPUTER SCIENCE ENGINEERING** 2022-2026
GURU GOBIND SINGH INDRAPRASTHA UNIVERSITY | CGPA: 8.54
- **DIPLOMA IN DATA SCIENCE AND APPLICATION (ONLINE)** 2022-2026
INDIAN INSTITUTE OF TECHNOLOGY MADRAS | CGPA: 8.0
- **Class 12: 94.8% | Class 10: 84.8% | Salwan Public School, New Delhi, India**
